**Dr. Urs Rickenbacher**  
Chief Executive Officer  
Lantal Textiles AG

*"For this innovation project, we simply had two things in mind: To exceed JetBlue's expectations and to offer JetBlue's Mint customers the most comfortable experience on a single aisle aircraft."*

**Jamie Perry**  
VP Marketing  
JetBlue

*"When we designed Mint, we set out to reinvent the premium travel experience and create the most comfortable lie-flat bed in the US domestic market. The luxurious massage and adjustable firmness features are just a few things that our customers love about flying on Mint."*

## Best way to travel – Lantal's PCS

### Highest reliability and lowest weight

Lantal's Pneumatic Comfort System has proven to be highly reliable and mature in operation with JetBlue since 2014.

After the initial 11 line-fit A321 jets, JetBlue just added 12 brand-new Airbus A321 aircraft to its fleet, equipped with Lantal's pneumatic cushions on Thompson Vantage Mint seats.

Lantal's PCS not only improves the seating comfort on Mint seats dramatically, but by the same token reduces weight, up to several kg per seat.

### Best-in-class comfort

JetBlue's Mint customers can individually select their own comfort level and enjoy the best-in-class massage / lumbar support system, by simply pushing a button.

Lantal's PCS reduces overall costs for JetBlue and at the same time provides the most comfortable travel experience on the market for their Mint customers.

In other words, a win-win situation for JetBlue and its Mint customers.

### PCS key facts

- ✓ Highest reliability
- ✓ Exceptional comfort
- ✓ Adjustable firmness features
- ✓ Lowest weight
